

StringReader

```
// StringReader örneği
import java.io.*;

class ReadString {
    public static void main(String args[]) {
        // Get a string of input from the user
        char buf1[] = new char[64];
        try {
            Reader in = new InputStreamReader(System.in);
            in.read(buf1, 0, 64);
        } catch (Exception e) {
            System.out.println("Error: " + e.toString());
        }
        String s1 = new String(buf1);
        // Read the string and output it
        Reader in = new StringReader(s1);
        char buf2[] = new char[64];
        try {
            in.read(buf2, 0, 64);
        } catch (Exception e) {
            System.out.println("Error: " + e.toString());
        }
        String s2 = new String(buf2);
        System.out.println(s2);
    }
}
```
